Projects

1. **Fly Parts** | Client-Side-Repo | Server-Side-Repo

This is a full-stack website with admin panel access and a payment gateway. Here users can buy aircrafts parts.
- Admin and users have different roles and user experiences.
- Admin has full control over products. They can update the products.
- Users can purchase products and pay for them through Stripe.

Used technology in the project:
1.React JS, 2.Node JS , 3.Express JS , 4.MongoDB , 5.Tailwind CSS 6.Firebase, 7. JWT, 8. Stripe, 9. React router, 10. React toastify.

2. **Ultimate Bikes** | Client-Side-Repo | Server-Side-Repo

This is a Full-stack website. This is a huge bike warehouse management website. The client can manage orders, and deliver and import bikes from here.

- A user can import and export his bikes.
- A user can see the bikes added by him/her.
- User-friendly login and logout method.

Used technology in the project:

1.React JS, 2.Node JS , 3.Express JS , 4.MongoDB , 5.Bootstrap, 6.Firebase, 7. JWT, 8. React router, 9. React leaflet,10.React toastify.

3. [Learn Swim](#) | [Github Repo](#)

This is a front-end website of an independent service provider. This is a swimming trainer's website.

- Here users can see the trainer's swimming training packages.
- Users can book a package.
- The user can put a review.

Used technology in the project:

1. React JS, 2. Bootstrap, 3. Firebase, 4. JWT, 5. React router.

Educational Qualification

Currently studying in BSc in Aeronautical Engineering at the College of Aviation Technology (2021-2024).

Web-development: Complete web development with Jhankar Mahbub at Programming Hero.

Language

Bangla (native), English (fluent), Hindi (comfortable).
